About

Driven by a passion for understanding decision-making in financial markets, my journey spans diverse educational and cultural experiences across Spain, Germany, the Netherlands, and Denmark. With expertise in financial markets, machine learning, and behavioral finance, I leverage advanced methodologies to explore the psychological and market dynamics shaping economic outcomes. My research and professional experiences, from investigating short-sale disclosures to advising on financial risk, reflect a commitment to bridging theory and practice. I aim to contribute to both academia and industry by fostering insights that promote welfare and innovation in financial systems.
